

Proceedings of the State Environment Impact Assessment Authority Kerala

Present: Dr.H.Nagesh Prabhu, IFS (Rtd), Chairman, Dr. Jayachandran. K, Member & Sri. P.H. Kurian, I.A.S., Member Secretary,

Sub: SEIAA- Extension of Validity of Environmental Clearance & Amendment in Environmental Clearance for construction of Group Housing & Commercial Complex Project in Rajagiri Valley in Sy. Nos. 558 p, 559/1 to 11, 557/2, 560/1, 2, 563/5p, 11p, 12p, 569/1, 2, 569/1 to 11, of Kakkanad village, Kanayannur Taluk, Ernakulam District, Kerala by Fr. Dr. Jose Cletus Plackal, Provincial- CML, S.H. Provincial House - Granted-Orders issued.

STATE ENVIRONMENT IMPACT ASSESSMENT AUTHORITY, KERALA

No. 1136 (C)/EC/SEIAA/ KI/2017

dated, Thiruvananthapuram 22.10.2018

Ref: 1. Application dated 19-07-2016 from Fr. Dr. Jose Cletus Plackal, Provincial CMI CMI S.H. Provincial House, Rajagiri P.O, Kalamassery, Ernakulam, Kerala-683104.

- 2. Minutes of the 79th meeting of SEAC held on 25th&26th September, 2017.
- 3 Minutes of the 84th meeting of SEAC held on 22nd & 23rd January 2018.
- 4. Minutes of the 86th meeting of SEAC held on 27th February, 2018.
- 5. Minutes of the 87th meeting of SEAC held on 3rd March 2018.
- 6. Minutes of the 82nd meeting of SEIAA held on 15.03.2018.
- 7. Affidavit dated 17.03.2018 received from Fr. Jose Cletus Plackal, Provincial CMI

ENVIRONMENTAL CLEARANCE NO. 68/2018

Fr. Dr. Jose Cletus Plackal, Provincial CMI, Carmelites of Mary Immaculate, CMI, S.H. Provincial House, Rajagiri P.O, Kalamassery, Ernakulam, Kerala-683104, vide his application received online, has sought Environmental Clearance under EIA Notification, 2006 for the proposed Residential Project in Sy. Nos. 558 p, 559/1 to 11, 557/2, 560/1, 2, 563/5p, 11p, 12p, 569/1, 2, 569/1 to 11, of Kakkanad village, Kanayannur Taluk, Ernakulam District, Kerala. It is interalia, noted that the project comes under the Category B, 8(a) of Schedule of EIA Notification 2006. The height of the proposed building is 87 m and the total

plot area of the proposed project is 2.5142 ha. The total built-up area of about 1,26,530.96 sq.m. with supporting infrastructure facilities. The total cost of the project is Rs. 292 Crores.

Details of the project as furnished by the applicant are as follows:-

BASIC INFORMATION OF BUILDING PROJECT

(To be filled in by the Project Proponent)

Does the layout of streets & buildings maximize the potential for solar energy devices? Have you considered the use of street lighting, emergency lighting and solar hot water systems for use in the building complex? Substantiate with details

Is the shading effectively used to reduce cooling/heating loads? What principles have been used to maximize the shading of Walls on the East and the West and the Roof? How much energy saving has been effected?

Due consideration has been taken for maximum use of the solar energy while preparation of layout plan. The project proponent shall made provision for solar panel system (hot water purpose) in building block area and solar energy devices will be used for street lighting, emergency lighting in the proposed project. All the relevant features are incorporated like the

orientation of the building, shading effect etc.

Do the structure use energy-efficient space conditioning, lighting and mechanical systems? Provide technical details. Provide details of transformers and motor efficiencies, lighting intensity and air-conditioning load assumptions? Are you using CFC and HCFC free chillers? Provide specifications.

What are the likely effects of the building activity in altering the microclimates? Provide a self assessment on the likely impacts of the proposed construction on creation of heat island & inversion effects?

What are the thermal characteristics of the building envelope? (a) roof (b) external walls; and (c) fenestration? Give details of the materials used.

What is the rate of air nonconventional energy technologies are utilized in the overall energy consumption? Provide details of the renewable energy technologies used.

Suitable energy optimization will be adopted during the calculation of energy load of the proposed project. The space heating load will be minimized using passive solar structure and suitable buildings envelop material. Uses of incandescent lamp and halogen lamps have been avoided and energy efficient LED lamps will be used for all common The diesel generator sets automatically controlled to optimize their usage based on the actual load requirements at any time. Variable frequency drive systems would be adopted for the lifts, etc. to maximize the energy saving.

More open spaces are proposed within the site to creation of any heat islands. The roads and parking spaces would be with concrete slabs intermittent with grass on surrounding.

The building construction material namely bricks, concrete and steel are being used in the construction. U-factor, also known as Thermal Transmittance, is heat transmission in unit time through unit area of a material or construction and the boundary air films, induced by unit temperature difference between the environments on each side. The glass used will be with low emissivity and the other specifications of the glass will comply with the norms as per ECBC.

The use of non-conventional source of energy in the proposed construction project are as follows: -Solar Water Heater:-

The proposed project would install solar panels for hot water requirements in the building block and hence the dependency on electricity for hot water generation can be minimized. This would conserve lot of coal which produces the electricity through public supply and also load on D.G. sets also would

•	
	be reduced and there by conserve diesel. Solar Street Light: -
	It is also suggested to use solar cell powered street lights within the proposed project site for
	conservation of electricity.
	Use of LED Lamps: -
•	The project proponent would use LED Lamp which
	conserve less electricity.

pollution, noise & public nuisance.	All vehicles which bring construction material to
portation, notice & paorie nuisance.	THE VOIDCES WHICH OTHE CONSTRUCTION MACHINE TO

What measures are taken to minimize the impacts?

the site would possess Pollution Under Control Certificates (PUC). All vehicles would be of close body to avoid spread of dust from the loose materials, and vehicles which bring sand, stone dust, etc. would ensure that the above mentioned material are properly wetted during transportation to avoid dust generation. Pucca Road to be made in the construction site for the vehicle movement so that the dust generation due to the vehicular movement within the project site can be minimized. Stacking of construction material shall be confined to the project site only. All the D.G. Sets would have attached with Acoustic Enclosure for the sound pollution control and all sound generating construction activity to be minimized. Further barricading of the site with GI sheets of 10 ft height in the side abutting the public road during construction phase.

Are recycled materials used in roads and structures? State the extent of savings achieved?

The plastic (non-biodegradable solid waste) will be used along with coal tar during the construction of internal roads. This will increase the life of roads.

The Solid Waste Management Rules, 2016 will be followed in the Solid Waste Disposal Mechanism at the site during operation phase.

Collection & segregation within the site (biodegradable waste (green bins), non-biodegradable waste (blue bins) and domestic hazardous waste (yellow bins).

The recyclable waste like packaging material, paper etc. would be sold through vendors and the area earmarked for the storage of the same (non-biodegradable waste).

The Bio-degradable waste would be disposed through the bio-gas generation plant / bio bin system to be installed within the site.

The domestic hazardous waste which includes discarded painted drums, pesticide cans, CFL bulbs, tube lights, expired medicines, broken mercury thermometers, used batteries, used needles and syringes and contaminated gauge etc. generated at the bousehold level will be collected in yellow bins and to be handed over to authorized waste pickers or waste collectors.

Further, the spent oil from the D.G. sets (defined as hazardous waste) will be sold to C.P.C.B. approved recyclers.

Give details of the methods of collection, segregation & disposal of the garbage generated during the operation phases of the project.

RISK MANAGEMENT

SUM	MARY AND CONCLUSION
	The proposed project is construction of residential
Overall justification for	cum commercial complex buildings and the total
implementation of the project.	implementation / completion period for the
	remaining construction is about 48 months from the
	start of the construction.
	It is predicted that socio-economic impact due to
∲	this project will positively increase the chance of
	more employment opportunities for local
	inhabitants. There are no Resettlement and
Explanation of how adverse impac	Rehabilitation issues involved in this project. The
have been mitigated.	project infrastructures will be of use to people of the area. The revenue of the State Govt, will be
	definitely increase due to the proposed activity. The
	entire project area is devoid of any endemic /
	endangered flora and fauna. As part of the eco
	restoration with native species to a maximum
	possible extent. Also, rain water tanks are
	possible extente rino, run water talks are

proposed for storage of rain water and for its subsequent use so as to conserve fresh water consumption. The municipal solid waste & e-waste will be handled and disposed as per norms. Thus the proposed project is not likely to affect the environment or adjacent ecosystem adversely and will ensure a sustainable development.

- 2. The proposal was placed in the 79th meeting of SEAC held on 25th&26th September, 2017 and decided to defer the item for field inspection. The committee also directed the proponent to submit the following additional documents/ clarifications.
 - 1) Submit the copy of the documents to prove that the application has been preferred for extension within the stipulated time period.
 - 2) The detailed separate parking plan for residential, commercial and hotel facilities.

Accordingly a site inspection was conducted on 28 12 2017 by the sub-committee of SEAC, Kerala. The report is as follows;

Field visit to the site was carried out by the sub-committee of SEAC, Kerala in the presence of the representatives. The site is located adjacent to Rajagiri Institute with its approach from the Info-Park express way. Additional entry exists from a wide road on the southern side inside the Rajagiri Campus. The site is a flat land with elevation not exceeding 5 m amsl. A stream originating from the southern side of Civil Station flows along the western boundary.

The group housing complex has been completed without any change in height or area but with a change in internal dimension of units. The construction of the Commercial complex is yet to be initiated. Considering the overall development and proposed construction the following points merits consideration

- 1. Compliance report on the condition laid down in EC by MOEF
- 2. Record that extension was requested before the expiry of the period
- 3. Split up of parking with enhancement in the number of vehicles. The parking plan with traffic circulation to be provided.
- 4. At least 6 m distance to be left from the edge of the stream as a no development zone
- 5. RWH facility to be enhanced at least 3200KL
- 6. Six wells are planned as dependable source of water. Two of them are developed. The yield test of the two wells to be provided.
- 7. Designated assembly points, separately for housing and commercial complex, to be marked on the plan clearly indicating the area set apart. It should have free access from the buildings.
- 8. Commercial and residential to have separate STP and indicated in the plan. The disposal of excess treated water to be highlighted. The mechanism of solid waste

disposal needs clarification with allocation for material recovery facility.

- 3. The proposal was placed in the 84th meeting of SEAC held on 22nd & 23rd January 2018. The Committee appraised the proposal based on Form 1, Form I A, Conceptual Plan, field inspection report of the Sub Committee and all other documents submitted with the proposal. The Committee also directed the proponent to submit the following additional documents/clarifications.
 - 1. Compliance report on the conditions laid down in the EC issued by the MOEF
 - 2. Split up of parking with enhancement in the number of vehicles. The parking plan with traffic circulation to be provided.
 - 3. At least 6 m distance to be left from the edge of the stream as a no development, zone
 - 4. RWH facility to be enhanced at least 3200KL
 - 5. Six wells are planned as dependable source of water. Two of them are developed.

 The yield test of the two wells to be provided.
 - 6. Designated assembly points, separately for housing and commercial complex, to be marked on the plan clearly indicating the area set apart. It should have free access from the buildings:
 - 7. Commercial and residential to have separate STP and indicated in the plan. The disposal of excess treated water to be highlighted. The mechanism of solid waste disposal needs clarification with allocation for material recovery facility.
 - 4. The proponent has submitted the documents sought by 84th SEAC. The proposal was placed in the 86th meeting of SEAC held on 27th February, 2018. The Committee observed that the proponent has increased the parking facility for four wheelers from 323 to 428 cars. However, the Committee deferred the item for submission of the results of yield test of two already developed wells.
 - 5. The proponent has submitted the documents sought by SEAC. The proposal was placed in the 87th meeting of SEAC held on 3rd March 2018. The Committee appraised the proposal based on Form 1, Form I A, field inspection report of the Sub Committee and all other documents submitted with the proposal. The Committee verified the additional documents submitted by the proponent and found satisfactory. The Committee decided to **Recommend for issuance of EC** subject to general conditions in addition to the following specific conditions.
 - 1. Parking space for 4 wheelers should be enhanced from 323 to 458.
 - 2. At least 6 m distance to be left from the edge of the stream as a no development zone
 - 3. RWH facility to be enhanced at least 3200KL
 - 4. Designated assembly points, separately for housing and commercial complex, to be provided. It should have free access from the buildings.

- 5. Commercial and residential to have separate STP as assured and should be of zero discharge.
- 6. Material recovery area of 250 sq. m to be provided.

The proponent consented to set apart Rs.35 lakh per annum (recurring) for community welfare activities in consultation with the local body.

6. The proposal was placed in the 82nd meeting of SEIAA held on 15.03.2018. Authority accepted the recommendation of SEAC and decided to issue EC subject to general conditions in addition to the above specific condition as suggested by SEAC.

As per the landmark judgment dated 3rd September 2017 of the Principle Bench of National Green Tribunal (NGT), developers should give a satisfactory explanation on the facilities provided for open space; recreational grounds and parking facilities at the project site as they have an important bearing on the life of people. The above direction has to be complied by the Proponent.

2% of the total project cost should be set apart for CSR activities for taking up welfare activities of the local community in consultation with the local body. There should be uninterrupted source of supply of water. The CSR amount should be utilized before the completion of the project and should be included in the annual account of the company and the expenditure statement should be submitted to SEIAA along with the compliance report after getting certified by a Chartered Accountant, A notarised affidavit for the commitment of CSR activities and also agreeing all the above specific and general conditions should be submitted before the issuance of EC.

7. The proponent has submitted the affidavit vide ref (7) above and stating that all the specific and general conditions shall be strictly implemented. Environmental Clearance as per the EIA notification 2006 is therefore granted to the construction of Group Housing & Commercial Complex Project by Fr. Jose Cletus Plackal, Provincial- CMI, S.H. Provincial House in Rajagiri Valley in Sy. Nos. 558 p, 559/1 to 11, 557/2, 560/1, 2, 563/5p, 11p, 12p, 569/1, 2, 569/1 to 11, of Kakkanad village, Kanayannur Taluk, Ernakulam District, Kérala subject to the specific conditions mentioned in para 5 & 6 above, the usual general conditions for projects other than mining appended hereto and the following green conditions should be strictly adhered to.

Green Conditions.

1. Adequate rain water harvesting facilities shall be arranged for.

- 2. Technology and capacity of the STP to be indicated with discharge point (if any) of the treated effluent.
- -3. Effluent water not conforming to specifications shall not be let out to water bodies.
- 4. Maximum reuse of grey water for toilet flushing and gardening and construction work shall be ensured.
- 5. Dual plumbing for flushing shall be done.
- 6. Provisions for disposal of e-wastes, solid wastes, non-biodegradables and separate parking facility for the buildings shall be provided.
- 7. Generation of solar energy to be mandatory for own use and/or to be provided to the grid.
- 8. There shall be no compromise on safety conditions and facilities to be provided by the project proponent, which shall be ensured for occupation, regularisation or consent to operate.
- 8. The clearance will also be subject to full and effective implementation of all the undertakings given in the application form, all the environmental impact mitigation and management measures undertaken by the project proponent in the documents submitted to SEIAA, and the mitigation measures and waste management proposal as assured in the Form 1 and Form-1A, Environment Management Plan as submitted. The assurances and clarifications given by the proponent in the application and related documents will be deemed to be part of these proceedings as conditions as undertaken by the proponent, as if incorporated herein.
- 9. Validity of the Environmental Clearance will be seven years from the date of issuance of E.C, subject to inspection by SEIAA on annual basis and compliance of the conditions, subject to earlier review of E.C in case of violation or non-compliance of any of the conditions stipulated herein or genuine complaints from residents within the scrutiny area of the project.
- 10. Compliance of the conditions herein will be monitored by the State Environment Impact Assessment Authority or its agencies and also by the Regional Office of the Ministry of Environment and Forests, Govt. of India, Bangalore.
 - i. Necessary assistance for entry and inspection by the concerned officials and staff should be provided by the project proponents.
 - ii. Instances of violation if any shall be reported to the District Collector, Ernakulam to take legal action under the Environment (Protection) Act 1986.

The given address for correspondence with the authorized signatory of the project is,

GENERAL CONDITIONS (for projects other than mining)

- (i) Rain Water Harvesting capacity should be installed as per the prevailing provisions of KMBR / KPBR, unless otherwise specified elsewhere.
- (ii) Environment Monitoring Cell as agreed under the affidavit filed by the proponent should be formed and made functional.
- (iii) Suitable avenue trees should be planted along either side of the tarred road and open parking areas, if any, inclusive of approach road and internal roads.
- (iv) The project shall incorporate devices for solar energy generation and utilization to the maximum possible extent with the possibility of contributing the same to the national grid in future.
- (v) Safety measures should be implemented as per the Fire and Safety Regulations.
- (vi) STP should be installed and made functional as per KSPCB guidelines including that for solid waste management.
- (vii) The conditions specified in the Companies Act, 2013 should be observed for Corporate Social Responsibility.
- (viii) The proponent should plant trees at least 5 times of the loss that has been occurred while clearing the land for the project.
 - (ix) Consent from Kerala State Pollution Control Board under Water and Air Act(s) should be obtained before initiating activity.
 - (x) All other statutory clearances should be obtained, as applicable, by project proponents from the respective competent authorities including that for blasting and storage of explosives.
 - (xi) In the case of any change(s) in the scope of the project, the project would require a fresh appraisal by this Authority.
- (xii) The Authority reserves the right to add additional safeguard measures subsequently, if found necessary, and to take action including revoking of the environment clearance under the provisions of the Environment (Protection) Act, 1986, to ensure effective implementation of the suggested safeguard measures in a time bound and satisfactory manner.
- (xiii) The stipulations by Statutory Authorities under different Acts and Notifications should be complied with, including the provisions of Water (Prevention and Control of Pollution) Act, 1974, the Air (Prevention and control of Pollution) act 1981, the Environment (Protection) Act, 1986, the Public Liability (Insurance) Act, 1991 and EIA Notification, 2006.
- (xiv) The environmental safeguards contained in the EIA Report should be implemented in letter and spirit.
- (xv) Provision should be made for supply of kerosene or cooking gas and pressure cooker to the labourers during construction phase.
- Officials from the Regional of MOEF, Banglore who would be monitoring the implementation of environmental safeguards should be given full co-operation, facilities and documents/data by the project proponents during their inspection. A complete set of all the documents submitted to MoEF should be forwarded to the CCF, Regional Office of MOEF, Bangalore.
- (xvii) These, stipulations would be enforces among others under the provisions of Water (Prevention and Control of Pollution) Act, 1974, the Air (Prevention and Control Pollution) at 1981, the Environment (Protection) Act, 1986, the Public Liability (Insurance) Act, 1991 and EIA Notification, 2006.

- (xviii) Environmental Clearance is subject to final order of the Hon'ble Supreme Court of India in the matter of Goa Foundation Vs. Union of India in Writ Petition (Civil) No.460 of 2004 as may be applicable to this project.
 - (xix) Any appeal against this Environmental Clearance shall lie with the National Environment Appellate Authority, if preferred, within a period of 30 days as prescribed under section 11 of the National Environment Appellate Act, 1997.
 - The project proponent should advertise in at least two local newspapers widely circulated in the region, one of which (both the advertisement and the newspaper) shall be in the vernacular language informing that the project has been accorded Environmental Clearance and copies of clearance letters are available with the Department of Environment and Climate Change, Govt. of Kerala and may also be seen on the website of the Authority at www.seiaakerala.org. The advertisement should be made within 10 days from the date of receipt of the Clearance letter and a copy of the same signed in all pages should be forwarded to the office of this Authority as confirmation.
 - (xxi) A copy of the clearance letter shall be sent by the proponent to concerned GramaPanchayat/ District Panchayat/ Municipality/Corporation/Urban Local Body and also to the Local NGO, if any, from whom suggestions / representations, if any, were received while processing the proposal. The Environmental Clearance shall also be put on the website of the company by the proponent.
- (xxii) The proponent shall submit half yearly reports on the status of compliance of the stipulated EC conditions including results of monitored data (both in hard copies as well as by e-mail) and upload the status of compliance of the stipulated EC conditions, including results of monitored data on their website and shall update the same periodically. It shall simultaneously be sent to the respective Regional Office of MoEF, Govt, of India and also to the Directorate of Environment and Climate Change, Govt. of Kerala.
- (xxiii) The details of Environmental Clearance should be prominently displayed in a metallic board of 3 ft x 3 ft with green background and yellow letters of Times New Roman font of size of not less than 40.
- (xxiv) The proponent should provide notarized affidavit (indicating the number and date of Environmental Clearance proceedings) that all the conditions stipulated in the EC shall be scrupulously followed.

SPECIFIC CONDITIONS

I.Construction Phase

- i. "Consent for Establishment" shall be obtained from Kerala State Pollution Control Board under Air and Water Act and a copy shall be submitted to the Ministry before start of any construction work at the site.
- ii. All required sanitary and hygienic measures should be in place before starting construction activities and to be maintained throughout the construction phase.
- iii. A First Aid Room will be provided in the project both during construction and operation of the project.
- iv. Adequate drinking water and sanitary facilities should be provided for construction workers at the site, Provision should be made for mobile toilets. The safe disposal of wastewater and solid wastes generated during the construction phase should be ensured.
- v. All the topsoil excavated during construction activities should be stored for use in horticulture/landscape development within the project site.

- vi. Disposal of muck during construction phase should not create any adverse effect on the neighbouring communities and be disposed taking the necessary precautions for general safety and health aspects of people, only in approved sites with the approval of competent authority.
- vii. Soil and ground water samples will be tested to ascertain that there is no threat to ground water quality by leaching of heavy metals and other toxic contaminants.
- viii. Construction spoils, including bituminous material and other hazardous materials, must not be allowed to contaminate watercourses and the dump sites for such material must be secured so that they should not leach into the ground water.
- ix. Any hazardous waste generated during construction phase, should be disposed off as per applicable rules and norms with necessary approval of the Kerala State Pollution Control Board.
- x. The diesel generator sets to be during construction phase should be low sulphur diesel type and should conform to Environment (Protection) Rules prescribed for air and noise emission standards.
- xi. The diesel required for operating DG sets shall be stored in underground tanks and if required, clearance from Chief Controller of Explosives shall be taken.
- xii. Vehicles hired for bringing construction material to the site should be in good condition and should have a pollution check certificate and should conform to the applicable air and noise emission standards and should be operated only during non-peak hours.
- xiii. Ambient noise levels should conform to residential standards both during day and night. Incremental pollution loads on the ambient air and noise quality should be closely monitored during construction phase. Adequate measures should be made to reduce ambient air and noise level during construction phase, so as to conform to the stipulated standards by CPCB/KSPCB.
- xiv. Fly ash should be used as building material in construction as per the provisions of Fly Ash Notification of September, 1999 and amended as on 27th August 2003. (The above condition is applicable Power Stations).
- xv. Ready mixed concrete must be used in building construction.
- xvi. Storm water control and its re-use per CGWB and BIS standards for various applications
- xvii. Water demand during construction should be reduced by use of pre-mixed concrete, curing agents and other best practices referred.
- xviii. Permission to draw ground shall be obtained from the Computer Authority prior to construction/operation of the project.
- xix. Separation of grey and black water should be done by the use of dual plumbing line for separation of grey and black water.
- Fixtures for showers, toilet flushing and drinking should be of low flow either by use of aerators or pressure reducing devices or sensor based control.
- xxi. Use of glass may be reduced by upto 40% to reduce the electricity consumption and load on airconditioning. If necessary, use high quality double glass with special reflective coating in windows.
- xxii. Roof should meet prespective requirement as per Energy Conservation Building Code by using appropriate thermal insulation material to fulfil requirement.
- xxiii. Opaque wall should meet perspective requirement as per energy Conservation Building Code which is proposed to be mandatory for all airconditioned spaces while it is aspirational for non-airconditioned spaces by use of appropriate thermal insulation material to fulfil requirement.

xxiv. The approval of the competent authority shall be obtained for structural safety of the buildings due to earthquake, adequacy of fire fighting equipments, etc. as per National, Building Code including protection measures from lightening etc.

xxv. Regular supervision of the above and other measures for monitoring should be in place all through the construction phase, so as to avoid disturbance to the

surroundings.

xxvi. Under the provisions of Environment (Protection) Act, 1986, legal action shall be initiated against the protect proponent if it was found that construction of the project has been started without obtaining environmental clearance.

II. Operation Phase

- i. The installation of the Sewage Treatment Plant (STP) should be certified by an independent expert and a report in this regard should be submitted to the Ministry before the project is commissioned for operation. Treated affluent emanating from STP shall be recycled / reused to the maximum extent possible. Treatment of 100% grey water by decentralised treatment should be done. Discharge of unused treated affluent shall conform to the norms and standards of the Kerala State Pollution Control Board. Necessary measures should be made to mitigate the odour problem from STP.
- ii. The solid waste generated should be properly collected and segregated. Wet garbage should be composted and dry/inert solid waste should be disposed off to the approved sites for land filling after recovering recyclable material.
- iii. Diesel power generating sets proposed as source of back up power for elevators and common area illumination during operation phase should be of enclosed type and conform to rules made under the Environment (Protection) Act, 1986. The height of stack of DG sets should be equal to the height needed for the combined capacity of all proposed DG sets. Use low sulphur diesel. The location of the DG sets may be decided with in consultation with Kerala State pollution Control Board.
- iv. Noise should be controlled to ensure that it does not exceed the prescribed standards. During night time the noise levels measured at the boundary of the building shall be restricted to the permissible levels to comply with the prevalent regulations.
- v. The green belt of the adequate width and density preferably with local species along the periphery of the plot shall be raised so as to provide protection against particulates and noise
- vi. Weep holes in the compound walls shall be provided to ensure natural drainage of rain water in the catchment area during the monsoon period.
- vii. Rain water harvesting for roof run-off and surface run-off, as plan submitted should be implemented. Before recharging the surface run off, pre-treatment must be done to remove suspended matter, oil and grease. The borewell for rainwater recharging should be kept at least 5 mts. above the highest ground water table.

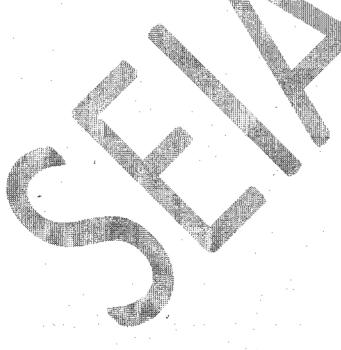

viii. The ground water level and its quality should be monitored regularly in consultation with Central Ground Water Authority.

- ix. Traffic congestion near the entry and exit points from the roads adjoining the purposed project site must be avoided. Parking should be fully internalized and no public space should be utilized.
- x. A Report on the energy conservation measures confirming to energy conservation norms finalise by Bureau of Energy Efficiency should be prepared incorporating details about building materials & technology, R & U Factors etc and submit to the Ministry in three months time.

- xi. Energy conservation measures like installation of CFLs/TFLs for the lighting, the areas outside the building should be integral part of the project design and should be in place before project commissioning. Use CFLs and TFLs should be properly collected and disposed off/sent for recycling as per the prevailing guidelines/rules of the regulatory authority to avoid mercury contamination. Use of solar panels may be done to the extent possible.
- xii. Adequate measures should be taken to prevent odour problem from solid waste processing plant and STP.
- xiii. The building should have adequate distance between them to allow movement of fresh air and passage of natural light, air and ventilation.

III Post Operational Phase

Environmental Monitoring Committee with defined functions and responsibility, should foresee post operational environmental problems e.g. development of slums near the site, increase in traffic congestion, power failure, increase in noise/level, natural calamities, and increase in suspended particulate matter etc. solve the problem immediately with mitigation measures

For Member Secretary, SEIAA
